AIQUAINTED • FREE WORKBOOK • VERSION 1.0.0 • 2026-11-07

The 15-Minute AI Workflow Finder

Choose one recurring customer-communication task that is useful, repeatable, and safe enough to improve with AI.

> **Your finish line:** one selected workflow, one safe first input, and one 15-minute test you can run this week.

For solo service-business owners. No technical experience required. AI can be wrong; review every customer-facing output.

MINUTE 0–4

1. List recurring communication work

Write tasks you already repeat. Do not start with what AI can do; start with work that already needs doing.

Task	How often?	Minutes now	Input already exists?
			Yes / No
			Yes / No
			Yes / No
			Yes / No
			Yes / No
			Yes / No

Ideas: weekly email, offer announcement, appointment reminder, FAQ update, review response, inquiry follow-up, short social variations.

> **Skip for now:** legal/medical/financial advice, emergency messages, high-stakes disputes, or work requiring confidential customer records.

MINUTE 5–9

2. Score the best candidates

Score 1 (low) to 3 (high). For Risk, 1 is low risk and 3 is high risk. Priority = Frequency + Time + Repeatability − Risk.

Task	Frequency	Time	Repeatability	Risk	Priority

A high score does not make a task safe. You remain responsible for facts, promises, privacy, tone, and final approval.

MINUTE 10–12

3. Choose one safe starter workflow

A

Weekly note → customer email

Input: offer facts, audience, dates, call to action.

Output: one concise email draft.

B

Email → three short variants

Input: approved email.

Output: three channel-ready drafts preserving the same facts.

C

Approved facts → FAQ update

Input: verified policy/service facts.

Output: five clear Q&As with unknowns flagged.

My choice

_____

Why it repeats:

_____

What makes it low-risk enough:

_____

Privacy red-flag check

Before using an AI service, remove or replace:

- Passwords, access codes, API keys, payment-card or bank data
- Private customer names, contact details, account numbers, health or legal details
- Internal pricing, contracts, unpublished plans, or employee records unless explicitly approved for that tool

Use placeholders such as **[CUSTOMER]**, **[DATE]**, and **[OFFER]**. Check the chosen AI provider’s current data controls before entering business information.

MINUTE 13–15

4. Run your first controlled test

Copy/paste request

You are helping a solo service-business owner draft customer communication.

Objective: Create [OUTPUT] from the verified source notes below.
Audience/context: [WHO + WHAT THEY NEED].
Constraints: Use only supplied facts. Do not invent claims, dates, prices, guarantees, or testimonials. Keep it [LENGTH/TONE].
Method: First identify missing facts; then draft.
Verification: End with a checklist of every factual claim and where it came from.
Output: [FORMAT].

Source notes: [PASTE REDACTED, VERIFIED NOTES]

Human review before use

☐ Names, dates, prices, links, terms, and availability match the source.
☐ No invented proof, guarantee, customer quote, or urgency.
☐ Tone sounds like the business—not generic or exaggerated.
☐ Private data is absent.
☐ Call to action is clear and possible.

> **Next step:** save the source note, request, corrected output, and review notes. Reuse only after your first test passes.
